→ Worked on the developing of the web applications using the PHP as a developing
language to fulfil the requirements of the customer. Wamp server was used to
manage the database. Beside this, did hands on the unit testing of the
applications to verify the basic errors.

PROJECTS

Banking Services (FIS Global)
- ➢ On this, worked on the validation of banking backend API using the POSTMAN and output of the console on client end by using the same data and tokens, both end results were compared before passing final API to the production side. In this worked on swagger validation and readiness of the APIs.

Financial Service on Sales-force (Technossus)
- ➢ On this, work was done using Selenium C# with visual studio to write Automation scripts for the testcase of sales-force platform to test the functionality of application by using user interface, in this N-Unit framework was used, data was fetched from JSON and Excel sheets and Extent Reports were created to view results of test cases.

Bio-Science (Technossus)
- ➢ On this, work was done using manual testing, POSTMAN and JMeter tools were used to validate the server requests and performance of the application. It was work on lab web application.

Child Sexual Abuse (Technossus)
- ➢ In this project, manual testing was used to work on quality assurance of web application, in which main tasks were to check functionality and performance on application before it reaches production. Beside this, data verification was the task as well.

E-Commerce for machine and tools (Always Infotech)
- ➢ In this project, worked on the development of website for the e-commerce of tools. In this task were to generate code so that data on the product page should be accurately updated as well as the database so that there should not be any conflicts.

Website for startup Company UNT (College Project)
Url: www.useneverthrow.com
- ➢ Objective of this project is to create an online platform where people can sell and buy product, can request for services. It is based on three government schemes of India and it was beta version. The project was developed using PHP, HTML, MySql, CSS, Java script.

TRAINING

Jun 2016 – Jul 2016   **Itronix Solution (Jalandhar)**

- ➢ Learned Asp.Net web development process using *CSS*, and *SQL Server* database. Utilised various tools of it, understood there uses and applications in designing dynamic web pages. In this worked on Visual studio.
